

SAWO FINLAND - NIMBUS SAUNA HEATER (PREMIUM)

Manufactured to an Australian specification, the Nimbus sauna heater is a one of a kind design due to the fact that all sides of the heater are covered with Finnish soapstone. The soapstone has an amazing ability to store heat which increases the steam produced when water is thrown on the sauna stones. Scent basins for essential oils are located in each corner of the heater. This floor standing heater is suitable for medium to large sized sauna rooms and requires a separate Innova control panel. The Nimbus can hold 50kg of Peridotite sauna stones.

FEATURES . . .
