

SAWO FINLAND - COMBI SAUNA HEATERS (PREMIUM)

Manufactured to an Australian specification, the Combi sauna heater includes an integrated stainless steel steamer which allows the user to choose between a traditional dry sauna or a steam/high humidity sauna. Combi heaters are equipped with Finnish soapstone scent basins for aroma oils and a patented Water Level Detection System that warns when the water level is low. The water level can be easily monitored through the water level indicator tube on standard stainless steel heater models. The unique design of the heating elements makes water tank cleaning easy. Requires a separate Innova control panel.

FEATURES . . .

- Finnish designed and engineered
- Manufactured to an Australian Specification (AS)
- Stainless steel construction, including the water tank
- Choice of traditional or steam bathing option according to user preference
- Unique design of heating elements makes water tank cleaning easy
- Patented water level detection system
- Separate Innova control panel
